Leaking or Damaged Containers

Leaking containers shall not be transported. If a container is damaged in the field, empty the contents of the damaged container into an undamaged container. The damaged container may be transported from the field to a proper disposal location by placing it in a UN 1A2 removable-head drum and installing the drum head or by evaporating the residue. To evaporate the residue from the damaged container, make sure that the container has been emptied as thoroughly as possible into another undamaged container and remove the caps or prop open the spring-loaded lids until the contents evaporate.
