

NWCG Data Standard
FIRE REPORTING AGENCY UNIT IDENTIFIER
Standard Data Values
October 14, 2007

Standard data values are provided when a data attribute has a pre-determined set of terms, codes, and/or numbers that must be used in order for the data to be valid. The purpose of standard data values is to ensure consistency and accuracy within a system and across multiple systems.

The standard data values for this data attribute are defined as part of the NWCG data standard for UNIT IDENTIFIER.

Refer to that data standard for the current list of NWCG's data values to be used for this data attribute.
