

NWCG
POSITION CODE AND TITLE
Standard Data Values

June 15, 2004

Standard data values are provided when a data element has a pre-determined set of terms, codes, and/or numbers that must be used in order for the data to be valid. The purpose of standard data values is to ensure consistency and accuracy within the system and across multiple systems.

The Incident Qualifications and Certification System (IQCS) serves as the system of record for Position Codes and Titles. The valid Position Codes and Titles are available on the IQCS Project website in Microsoft Excel format at: <http://iqcs.nwcg.gov/>

Guidelines for changing this list of standardized data values can be found in the Change Procedures for this data standard.
