

## How To Determine (Bullard) Helmet Manufacturing Date

**\*\*Note\*\*** For this inspection process, it is presumed that the helmet is worn with the black antiglare material in the front.

Step 1: Look under the front of the helmet brim and locate the black UBG sticker of antiglare material.

Step 2: Beginning at the left edge, carefully peel back the UBG sticker until the Date Code is exposed.

Step 3: The center of the Date Code shows the last two digits of the manufacturing year. The arrow points to the manufacturing month.

In this example, the DOM is April 2010.
