**DATE :** 07/10/2009

**SUBJECT :** SAFETY WARNING : DO NOT CONSUME MRE Dairy Shake Powder

---

### **DO NOT CONSUME MRE Dairy Shake Powder**

The Food and Drug Administration has determined a Minnesota dairy cooperative may have shipped nonfat dry milk (NFDM), fruit stabilizers, whey protein, and gum products potentially adulterated with *Salmonella* sp. to their commercial customers between June 2007 and June 2009. NFDM from this cooperative is known to be an ingredient used by manufacturers in the production of MRE and UGR-E Dairyshake Powder, Fortified with Calcium and Vitamin D.

#### **Facts:**

**Three manufacturers provide the MREs that we have through the National Interagency Caches, procured through the General Services Administration**

- **Ameriquel Packaging**
- **SOPAKO Packaging**
- **The Wornick Company**

**Ameriquel MREs that were manufactured on or after April 25, 2008 are GOOD**

**SOPAKO MREs that were manufactured on or after March 28, 2008 are GOOD**

#### **Unknown at this time:**

The extent of the Lot Numbers from the manufacturers that may be impacted is still unknown. The Defense Logistics Agency is working toward identifying all potential lot numbers and will post this information to a web site in the near future.

#### **Immediate Action Individuals:**

**Other than the MREs specifically identified above DO NOT CONSUME the Dairyshake Powder found in some of the MREs. Open the Dairyshake Package and dump the contents into the trash. The rest of the MRE is safe to consume.**

**Do not open MREs in mass and remove the Dairyshake Powder as this can compromise the shelf life of the remaining items.**

**Immediate Action National Interagency Caches:**

**Determine current inventory that is clearly good based on the above MRE dates. Place a sticker on the MREs that include the Dairyshake Powder that should not be consumed stating such. Place a different sticker on the MREs that contain Dairyshake powder that is safe to consume, to alleviate any potential confusion.**

The General Services Administration is working through their inventory and determining their stocking of safe-to-consume versus unsafe and will attach a sticker when shipping that they are safe to consume. They will not release any inventory that is not safe.

Upon receipt of additional information concerning specific Lot Numbers by manufacturer the National Interagency Caches will reassess their current inventory to determine if additional MREs are indeed safe concerning the consumption of the Dairyshake Powder. This information will be promptly communicated to the field.

Salmonella is an organism that can cause serious and sometimes fatal infections in young children, frail or elderly people, and others with weak immune systems. Healthy people infected with Salmonella often experience fever, diarrhea (which may be bloody), nausea, vomiting, and abdominal pain. Most healthy people recover from Salmonella infections without treatment. In rare circumstances, infection with Salmonella can result in the organism getting into the bloodstream and producing more severe illnesses, such as arterial infections (infected aneurysms), infection of the lining of the heart, and arthritis.
