Part 1: Wildfire Qualification Subsystem

A. INTRODUCTION

The Wildland Fire Qualification Subsystem (310-1), developed under the sponsorship of the National Wildfire Coordinating Group (NWCG), provides guidance to participating agencies and organizations. This guidance is given for the establishment of standards for wildland firefighting personnel. Those personnel meeting the established standards are qualified for mobilization beyond their geographical area.

Personnel who are certified in a position, prior to the implementation of this subsystem, may retain such certification at the discretion of their agency. To qualify in any other position, the individual must meet the standards identified herein.

This system is designed to:

1. Establish minimum training, skills and knowledge, experience and physical fitness standards for the incident ICS and skill positions which all participating agencies have agreed to meet for national mobilization purposes. Standards may be augmented to meet specific needs within an agency, but cannot be imposed on cooperators meeting the minimums outlined in this guide.

2. Allow cooperating agencies at the local level to jointly agree upon training, skills and knowledge, experience and physical fitness standards required to meet suppression needs at the local level.

Any organization or agency intending to supply resources to incidents to meet national level interagency requests will be expected to meet the minimum national requirements described in this guide.

B. DESCRIPTION OF THE SUBSYSTEM

The Wildland Fire Qualifications System is a "performance based" qualifications system. In this system, the primary criteria for qualification is individual performance as observed by an evaluator using approved standards. This system differs from
previous wildland fire qualifications systems which have been "training based". Training based systems use the completion of training courses or a passing score on an examination as a primary criteria for qualification.

A performance based system has two advantages over a training based system:

. Qualification is based upon real performance, as measured on the job, versus perceived performance, as measured by an examination or classroom activities.

. Personnel who have learned skills from sources outside wildfire suppression, such as agency specific training programs or training and work in prescribed fire, structural fire, law enforcement, search and rescue, etc., may not be required to complete specific courses in order to qualify in a wildfire position.

1. The components of the wildland fire qualifications system are as follows:

   a. **Position Task Books (PTB)** contain all critical tasks which are required to perform the job. There will be a PTB for each position included in the system except for the following positions: Agency Representative, Interagency Resource Representative, and Air Tanker/Fixed Wing Coordinator. The tasks in each PTB have been established by experts from all NWCG agencies and geographical areas of the United States, tested on wildland fire incidents, and approved by NWCG. PTB's have been designed in a format which will allow documentation of a trainee's ability to perform each task. Tasks pertaining to tactical decision making and safety are flagged and require a position performance on a wildfire. Remaining tasks may be evaluated through other means such as simulation, prescribed fire, insect eradication, or other emergency and non-emergency work. Successful completion of all tasks required of the position, as determined by an evaluator, will be the basis for recommending certification.

   The following positions utilize the same PTB for the type 2 and type 1 levels (ICT1/2, PSC1/2, OSC1/2, LSC1/2, FSC1/2, SOF1/2, IOF1/2, HEB1/2). It is expected that for those positions having the same PTB the trainee will complete a second book for the next complexity level. Example: A person completes a PTB for ICT2 and is now qualified in that position. With adequate experience and any required training received, the local office makes a determination that the person is ready for advancement to the ICT1 position. The local office issues a new ICT 1/2 PTB and in
crossing out the number 2 on the PTB cover, identifies that the trainee is working to complete the ICT1 position.

IMPORTANT NOTE: Training requirements include completion of all required training courses prior to obtaining a PTB. Use of the suggested training courses or job aids is recommended to prepare the employee to perform in the position. An employee should not be given a position performance assignment if training would be necessary to complete the required tasks of the position.

b. Training courses and job aids provide the specific skills and knowledge required to perform tasks as prescribed in the PTB. This provides a direct link between training and job performance. Required training has been held to the minimum required for safe operations on a wildfire. Although most training courses are not "required", all training will be available and is still intended to be the primary means by which personnel can prepare for qualification. The decision on development of a specific job aid and/or a training course will be made at the time of development. Current training courses are expected to be used until the newly developed job aids or courses are available.

c. Agency Certification is issued in the form of an incident qualification card certifying that the individual is qualified to perform in a specified position. Individuals are responsible for demonstrating proof of qualification on an incident for all positions except Advanced Firefighter/Squad Boss (FFT1), Firefighter (FFT2), Helicopter Crewmember (HECM), Display Processor (DPRO), Status/Check-In Recorder (SCKN), Personnel Time Recorder (PTRC) and Equipment Time Recorder (EQTR). Each agency shall qualify and document these positions but need not provide an incident qualification card to agency personnel to exhibit while on an incident.

2. Responsibilities

The local office is responsible for selecting trainees, proper use of task books, and certification of trainees, see the Task Book Administrators Guide 330-1 for further information.

The individual is responsible for showing proof of qualifications, completing training courses and completing a position task book.

The Training Specialist on an incident is responsible for managing a training and qualification program on the incident, considering the needs of the local agency which is responsible
for the incident, cooperating agencies, and incident personnel.

C. CERTIFICATION AND RECERTIFICATION

Management at the sending unit is responsible for certifying and recertifying qualifications of its personnel based upon the requirements of this guide. This responsibility includes evaluation of personnel for recertification in cases where position qualifications have been lost as a result of a lack of current experience.

A key component in the certification or recertification process is the subjective evaluation by management of an individual's capability to perform in a position. Completion of prerequisite training and experience requirements alone does not guarantee that an individual is qualified to perform the work. This is the primary reason for requiring position performance in many positions before certification for a position is granted.

The quality of experiences gained in a given position should be closely evaluated when making a determination for advancement to the next higher position or to a different position. The quality of experience may relate to the number of fuel types in which an individual has performed, size of the incident organization in terms of personnel and equipment, and the number of assignments or complexity of operations to include the different types of resources managed on an incident.

This guide does not recommend the number of times an individual should serve as a trainee or how many times a given position should be filled before advancement. That is a determination that a supervisor must make based on task evaluations, position performance evaluations and their own judgement on the quality of an individual's experience.

D. CURRENCY REQUIREMENTS

Unless otherwise noted, the maximum time allowed for maintaining currency is three (3) years for air operations positions and five (5) years for all other positions. For example, the currency requirement for a Resource Unit Leader is to have functioned in a satisfactory manner in the last five years as a Resource Unit Leader or as a Demobilization Unit Leader or as a Planning Section Chief Type 1 or 2. Serving in a position for which the individual is qualified will maintain the currency of a prerequisite position, providing that the individual was previously qualified in that position. In addition, one may maintain currency in a position when serving in a lower specified position (see Section K, "ICS, Skill and Dispatch Position
Currency requirements for air operations positions may be met by performing in an air operations position or any higher position, and any specified lower or similar air operations duties on a day-by-day basis or on specific projects such as aerial spraying, search and rescue, and aerial ignition on prescribed burns. This type of position experience will be considered as qualifying only if the individual has previously met all training and prerequisite experience requirements for the position.

E. CHALLENGE PROCESS/REQUIRED TRAINING

Required training (those courses designated as required in Appendix B) and required experience are mandatory and cannot be challenged. It is not viewed as reasonable to challenge any positions due to the availability of task books and training courses to trainees. The process of demonstrating the abilities to perform the position is the completion of a task book. Agency equivalent courses with like learning and performance objectives may be substituted for those identified required courses (see Appendix B).

F. FITNESS STANDARDS

In addition to meeting the minimum national standards for training and experience, personnel must also meet standards for physical fitness. An accepted method to determine physical fitness is the measurement of an individual's ability to take in, transport, and use oxygen, which is the most important factor affecting ability to perform sustained arduous work. Sharkey 1/ states that the best measure for determining health and functional ability is maximal oxygen consumption (Max VO2).

Max VO2 is a measure of the maximum rate that oxygen can be consumed and is expressed in milliliters of oxygen per kilogram of body weight per minute. This range from about 20 milliliters for poorly conditioned people to about 80 for endurance athletes such as distance runners and cross-country skiers. Several methods, including the step test, have been used to measure or estimate Max VO2.

The following four categories of physical fitness have been established for purposes of this guide:

1. Arduous. Duties involve field work requiring physical
performance calling for above-average endurance and superior conditioning. These duties may include an occasional demand for extraordinarily strenuous activities in emergencies under adverse environmental conditions and over extended periods of time. Requirements include running, walking, climbing, jumping, twisting, bending, and lifting more than 50 pounds; the pace of work typically is set by the emergency situation. (Requires a Max V02 of 45.)

2. **Moderate.** Duties involve field work requiring complete control of all physical faculties and may include considerable walking over irregular ground, standing for long periods of time, lifting 25 to 50 pounds, climbing, bending, stooping, squatting, twisting, and reaching. Occasional demands may be required for moderately strenuous activities in emergencies over long periods of time. Individuals usually set their own work pace. (Requires a Max V02 of 40.)

3. **Light.** Duties mainly involve office type work with occasional field activity characterized by light physical exertion requiring basic good health. Activities may include climbing stairs, standing, operating a vehicle, and long hours of work, as well as some bending, stooping, or light lifting. Individuals almost always can govern the extent and pace of their physical activity. (Requires a Max V02 of 35.)

4. **None.** Duties are normally performed in a controlled environment, such as an incident base or camp.

Agencies have the latitude to determine the method of evaluating the physical fitness of their personnel. However, it should be a measurable evaluation process such as the Standard Step Test, 1-1/2 mile run, or other established measurable method as opposed to a subjective analysis.

All positions identified in Section K, ICS, Skill and Dispatch Position Qualifications of this document have established fitness levels. Should any position identified with a fitness level as "None" have the need to be on the fireline the required fitness level shall be "Light".

G. INCIDENT COMPLEXITY

There are many factors that determine the complexity of an incident, such as size, location, threat to life and property, political sensitivity, organizational complexity, jurisdictional

---

boundaries, values-at-risk, fuel type, topography, agency policy, etc. However, the qualifications of the Incident Commander (IC) assigned to an incident are the responsibility and the discretion of the responsible agency or agencies.

The Agency Administrator or designated representative must determine the complexity of an incident and assign qualified personnel as needed. In situations where multiple agencies and jurisdictions are involved, the determination of complexity and qualifications should be made jointly.

Note: The following descriptions are only guidelines to assist the manager in determining the complexity of an incident. They are not intended to correlate incident typing to team typing. It is felt that the administrator must obtain the qualifications necessary to handle the incident separately from the typing of the fire incident.

**TYPE 4: (Initial Attack Incident)**

Nationwide about 95 percent of all wildland fire incidents fall into this type. These are small incidents of relatively simple complexity that are handled with very few firefighting forces. This type of incident has the following characteristics:

1. Resources vary from a single firefighter to several single resources. Possibly a single Task Force or Strike Team.

2. Normally limited to one operational period - at least the control phrase. Mop up may extend into multiple periods.

3. Normally does not require a written action plan.

4. Normally the Command/General Staff positions will not be activated.

**TYPE 3: (Extended Attack Incident)**

Initial responses with a large number of resources or an extended attack are examples of this incident type. In a timber type, the incidents may be relatively small (less than 100 acres), but in range type areas the fire size could be significantly larger (1,000 acres or more).

Characteristics of a Type 3 Incident are:

1. Resources vary from several single resources to several
Task Forces/Strike Teams.

2. The incident may be divided into divisions, but would usually not meet the Division/Group Supervisor complexity in regards to span-of-control. The incident could be divided into segments.

3. May involve multiple operational periods prior to control. If so, a written action plan would be required.

4. Some Command and General Staff positions may be activated, but usually not at the Division/Group Supervisor and Unit Leader level as commonly used in Type 1 or 2 levels.

5. May utilize staging areas and establish a base.

TYPE 2:

This is the first level at which most or all of the Command and General Staff positions are activated. The Incident Commander and the Command/General Staff must function as a team handling all aspects of supervising a large organization, multiple operational periods, the gathering of information to develop an action plan, the developing of an action plan, and the providing of logistical support including the establishment and operation of a base and possibly camps.

Characteristics of a Type 2 Incident are:

1. Most or all of the Command/General Staff positions are filled.

2. Base/camp(s) are established.

3. The incident extends into multiple operational periods.

4. A written action plan is needed and prepared.

5. Many of the functional units are needed and staffed.

6. Number of lines workers per operational period usually does not exceed 200 and the total personnel on the incident normally does not exceed 500 personnel. These numbers are guides only.

TYPE 1:

The primary difference between a Type 1 and a Type 2 incident is a matter of size and complexity. The factors that affect the
decision to go to a "Type 1" operation are extremely variable and depend to a large extent upon the needs and policies of the agency or agencies involved.

A Type 1 incident almost always requires the establishment of divisions that require Division/Group Supervisor qualified personnel and may require the establishment of branches.

Incident Management Teams assigned to Type 1 Incidents are the agencies' most qualified personnel.

The Type 1 Incident meets all of the criteria of a Type 2 Incident plus the following:

1. Usually all Command and General Staff positions are activated.

2. Operations personnel may often exceed 500 per operational period and total personnel on the incident will usually exceed 1000. These numbers are guides only.

This is a large, complex incident and requires well-qualified personnel at the IC and Command/General Staff level. In most cases the personnel qualified at this level will have had multiple Type 2 assignments before being qualified and assigned at this level.

AREA COMMAND:

The Area Command organization is established when an incident is so large that it must be subdivided and managed as two or more separate incidents, or when multiple, separate incidents having separate Incident Commanders must be managed. The functions of Area Command differ from the Type 1 or 2 levels in that the role is oversight direction of multiple incidents rather than direct action on any one incident. Area Command manages the efforts of the various Incident Commanders to ensure that overall objectives are being met, to set priorities among incidents, and to allocate scarce resources.

H. REVIEW AND UPDATE OF THE QUALIFICATION SUBSYSTEM

To keep the Wildland Fire Qualification Subsystem viable and current, it is necessary to have a process for making revisions. This process requires users of the system to submit proposed revisions (in writing) through agency channels to the Incident Command System Working Team (ICSWT).

While the ICSWT may handle special problems at any time, the
planned revision interval will be three (3) years. Users may submit proposed revisions as needs are identified. The ICSWT will review the proposals and recommend adoption or rejection by NWCG.

I. POSITION CATEGORIES

The following three types of positions are identified in this guide:

1. **ICS positions.** Any position found on the ICS organizational chart in the Operational System Description (OSD). Training may include required and suggested "I" courses, "S" courses and a job aid.

Non-Operations Section personnel have an option of line certified training for duty when their skills are needed on the fireline. The following skills and knowledge are required for certification as identified in the following courses:

- Introduction to ICS (I-100)
- Firefighter Training (S-130)
- Introduction to Fire Behavior (S-190)

For those personnel in identified with a physical fitness level of none, whose skills are needed on the fireline, the physical fitness level shall be light. If a person has not received line certified training, they may travel to the line when accompanied by someone certifying completion of the skills and knowledge identified above.

The following is a listing of all ICS positions:

**ICS POSITIONS AND MNEMONICS**

Area Commander (ACDR)  
Area Command Logistics Chief (ACLCP)  
Area Command Planning Chief (ACPC)  
Agency Representative (AREP)  
Air Operations Branch Director (AOBD)  
Air Support Group Supervisor (ASGS)  
Air Tactical Group Supervisor (ATGS)  
Base/Camp Manager (BCMG)  
Clamis Specialist (CLMS)  
Commissary Manager (CMSY)  
Communications Unit Leader (COML)  
Compensation/Claims Unit Leader (COMP)  
Compensation-for-Injury Manager (INJR)  
Cost Unit Leader (COST)  
Demobilization Unit Leader (DMOB)  
Display Processor (DPRO)  
Division/Group Supervisor (DIVS)  
Interagency Resource Representative (IARR)  
Information Officer Type 1 (IOF1)  
Information Officer Type 2 (IOF2)  
Information Officer Type 3 (IOF3)  
Liaison Officer (LOFR)  
Logistics Section Chief Type 1 (LSC1)  
Logistics Section Chief Type 2 (LSC2)  
Medical Unit Leader (MEDL)  
Operations Branch Director (OPBD)  
Operations Section Chief Type 1 (OSC1)  
Operations Section Chief Type 2 (OSC2)  
Ordering Manager (ORDM)  
Personnel Time Recorder (PTRC)
2. **Skill positions.** These positions are unique to wildland fire suppression, they require a level of specific skills and knowledge to perform wildfire suppression jobs and are those positions not identified in the OSD but included in the attached organizational charts. Personnel should be assigned only to positions in which they have demonstrated the ability to perform successfully.

Non-Operations Section personnel have an option of line certified training for duty when their skills are needed on the fireline. The following skills and knowledge are required for certification as identified in the following courses:

- Introduction to ICS (I-100)
- Firefighter Training (S-130)
- Introduction to Fire Behavior (S-190)

For those personnel identified with a physical fitness level of none, whose skills are needed on the fireline, the physical fitness level shall be light. If a person has not received line certified training, they may travel to the line when accompanied by someone certifying completion of the skills and knowledge identified above.

The following is a listing of all skill positions:

**SKILL POSITIONS AND MNEMONICS**

**Wildfire Skill Positions**
Advanced Firefighter/Squad Boss (FFT1)  Firing Boss (Single Resource) (FIRB)
Crew Representative (CREP)              Fire Behavior Analyst (FBAN)
Crew Boss (Single Resource) (CRWB)      Firefighter (FFT2)
Dozer Boss (Single Resource) (DOZB)     Infrared Interpreter (IRIN)
Engine Boss (Single Resource) (ENGB)    Tractor/Plow Boss (Single Resource) (TRPB)
Felling Boss (Single Resource) (FELB)    Training Specialist (TNSP)

**Expanded Dispatch Skill Positions**

Coordinator (CORD)                     Supervisory Dispatcher (EDSP)
Dispatch Recorder (EDRC)                Support Dispatcher (EDSD)

3. Technical specialist positions. Technical specialists are personnel with special skills who are activated only when needed. These specialists may be used anywhere within the fire organization. No minimum qualifications are prescribed in this guide because these personnel usually perform the same duties during an incident that they perform in their everyday job. Most technical specialists are certified in their field or profession. To orient technical specialists, it is suggested that the skills and knowledge from the following training courses be reviewed:

- Introduction to ICS (I-100)
- Wildland Fire Suppression Orientation for Non-Operations Personnel (S-110)

Technical specialist personnel have an option of line certified training for duty when their skills are needed on the fireline. The following skills and knowledge are required for certification as identified in the following courses:

- Introduction to ICS (I-100)
- Firefighter Training (S-130)
- Introduction to Fire Behavior (S-190)

For all technical specialist personnel whose skills are needed on the fireline, the physical fitness level shall be light. If a person has not received line certified training, they may travel to the line when accompanied by someone certifying completion of the skills and knowledge identified above.

For titles and mnemonics of identified technical specialists see the National Interagency Mobilization Guide.

J. NATIONAL TEAMS

Any person filling a national type 1 team position in the incident commander or general staff positions must complete, as established in this guide, the Advanced Incident Management (S-
520) training course.

National team candidates for S-520 must be certified at the Type 1 level through the position task book process before being nominated to S-520 by the appropriate Geographic Coordinating Group.

Part 2: Prescribed Fire Qualification Subsystem

(reserved)
**GLOSSARY**

**Certification** - The process whereby an agency manager confirms through the issuance of an incident qualification card that an individual is qualified to perform in a specified position.

**Certified Person** - One who meets a fitness qualification, has prerequisite experience requirements, has successfully completed required training, has completed a specific PTB and has been agency certified and issued an incident qualification card for that specific position.

**Currency Requirement** - The requirement to perform satisfactorily in a specified position within the last five (5) years (three (3) years for aviation and some dispatch positions) to maintain qualification for the position.

**Evaluator** - A person who is certified in the position the trainee is being evaluated in and who is assigned to evaluate a trainee's performance against tasks listed in a PTB. The evaluator makes a determination as to whether the individual successfully performs a task; signs off on the task in the PTB, if the task is performed correctly; or determines what remedial actions are necessary if the task is not performed correctly. When all tasks in the PTB are successfully completed, (including successful position performance if required), the evaluator may recommend that the trainee receive a certification from his designated agency manager.

**Exception:** The local office may designate subject matter experts not qualified in the target position to do task evaluations for specific tasks coded "O". An example would be an agency administrative officer could sign off on a Compensation/Claims Unit Leader completing compensation and claims documents (Task #12).

**Experience** - Documented, satisfactory performance in a specified position needed to qualify for another (usually higher level) position.

**ICS Positions** - Any position found on the ICS organizational chart in the Operational System Description (OSD).

**Local Office** - The local office is the designated agency manager that hired the employee. This could be a district, county, state, park, reservation, or similar entity.
Other Assignments That Will Maintain Currency - Positions at a higher or specified lower level that will meet the currency requirements for a given position.

Position Performance - The evaluated performance of a trainee in fulfilling the duties of the target position in a wildfire setting.

Recertification - Confirmation, through the re-issuance of an incident qualification card, that an individual has regained qualification for a specified position that was lost through a lack of current experience. Recertification is based upon an individual's satisfactory performance in that position as a trainee, by simulation exercise, and/or by retaking the required training for that position.

Skill Position - Positions unique to wildland fire suppression which require a level of specific skills and knowledge to perform wildfire suppression jobs and are those positions not identified in the OSD but are included in the organizational charts of the Wildland Fire Qualification Subsystem Guide.

Task Evaluation. Evaluating the performance of an trainee against the tasks listed in the PTB. During the assignment the individual is required to perform the tasks under the direction and observation of an evaluator, who signs off on the PTB as tasks are completed, and completes the "incident experience record".

Technical Specialist - Personnel with special skills who are activated only when needed. These specialists may be used anywhere within the organization. No minimum qualifications are prescribed because they usually perform the same duties during an incident that they perform in their everyday job. Most technical specialists are certified in their field or profession.

Trainee - An individual, approved by their agency, who is preparing to qualify for a position through completion of training courses, on-the-job training, and task evaluation and position evaluation assignments. Also, a person who is attempting to demonstrate task evaluation or position performance of required job tasks under the direct supervision of an evaluator who is qualified in that position.
APPENDIX A

ICS, SKILL AND DISPATCH QUALIFICATION FLOW CHARTS
KEY TO QUALIFICATION FLOW CHARTS

The charts in this appendix show the progression of qualifications from one position to another within the system. These charts are not organization charts. Each box within the charts contains information pertaining to prerequisite qualifications, training, and physical fitness and should be read as shown in the diagram below:

---

* Incident Commander
  Type 2
  (ICT2)

Qualified As:
  ICT3 + DIVS +
  LSC2 or PSC2

Training:

* Indicates a course that contains critical knowledge and skills required for safe operations on a wildfire. Training in this course or an agency equivalent course with like learning and performance objectives is mandatory. Statistics indicate that lack of this type of knowledge and/or skill may have contributed to accidents.
